Additionally, RTVGSIPTF can access the PTF server through a proxy server, if required by your network, using the new PROXY() parameter.</li> </ul> <p>.</p> <p>We anticipate that some installations' networks will have problems accessing the PTF server over HTTP. On a temporary basis, RTVGSIPTF has introduced a PROTOCOL() parameter that allows you to switch back to the old FTP behavior while correcting problems with HTTP service. This parameter will ultimately be removed along with support for FTP as a transport mechanism.</p> <p>.</p>	10/10/17

	COMPATIBILITY WARNING . HTTP is now the default protocol for PTF retrieval. If your network restricts HTTP access or if a proxy is required for HTTP access the RTVGSIPTF command will fail. If a proxy is required you must fill in the PROXY() parameter. Otherwise you will have to specify PROTOCOL(*FTP) while you resolve problems with HTTP access on your network.		
1C80007	SPL Add PAGERANGE Single Value To MRGSPLF o The Merge Spooled File (MRGSPLF) command's Merge input list (MRGFILE) parameter has been modified. Element 5 'Page range to print:' has been given a single value of *ALL which is the default. This avoids a command prompter problem that resulted in an incorrect command string that could not be reprompted.	08/16/18
